

ABHAY SACHAN

React Developer | Frontend Engineer | MERN Stack Developer | React.js • Next.js • Node.js • TypeScript | 4+ Years

Noida, India | sachanabhay492@gmail.com | +91-9807941794 | linkedin.com/in/abhay-sachan | github.com/abhaysachan232

PROFESSIONAL SUMMARY

React / MERN Stack Developer with 4+ years of experience designing, building, and owning production-grade React.js and Next.js frontends end-to-end, backed by Node.js/Express.js and MongoDB services, RESTful API design, and JWT/RBAC-based authentication and authorization. Deep expertise in React performance optimization (Core Web Vitals, Lighthouse, memoization, lazy loading), reusable component-library architecture, and state management with Redux Toolkit and Context API. Comfortable across the MERN stack — MongoDB, Express.js, React, Node.js — with working exposure to cloud deployment on AWS and Azure alongside Vercel/Render CI/CD pipelines. Experienced collaborating with backend, QA, and product teams in Agile/Scrum environments. Proficient in AI-assisted development workflows (GitHub Copilot, Claude) to accelerate coding, debugging, and documentation. Independently designed, built, and continue to operate a production platform (SarkariResult.rest) serving 10,000+ monthly users, and independently published an open-source npm package (react-perf-kit) for React performance optimization.

CORE SKILLS

React.js (Hooks, Context, Portals) | MERN Stack (MongoDB, Express.js, React.js, Node.js) | TypeScript | Next.js (SSR, SSG, ISR) | Node.js | Express.js | REST API Design & Integration | JWT Authentication | Role-Based Access Control (RBAC) | Redux Toolkit | MongoDB | PostgreSQL | AWS | Microsoft Azure | Microservices Architecture | Micro-Frontend Architecture (Module Federation) | Performance Optimization (Core Web Vitals, Lighthouse) | CI/CD | Git & GitHub | Agile / Scrum | Cross-Functional Collaboration | AI-Assisted Development (GitHub Copilot, Claude)

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js (SSR/SSG/ISR), Micro-Frontend Architecture (Module Federation), Redux Toolkit, Context API, Component-Based Architecture, Reusable Component Library Design, Tailwind CSS, Bootstrap, Core Web Vitals & Performance Optimization

Backend: Node.js, Express.js, Microservices Architecture, REST API Development & Integration, JWT Authentication, RBAC, Bcrypt, Axios

Database: MongoDB (Atlas), Mongoose, PostgreSQL

Cloud & Deployment: AWS (EC2, S3), Microsoft Azure, Vercel, Render, CI/CD Pipelines (GitHub Actions)

Testing: Jest, React Testing Library

Tools & Platforms: Git, GitHub, Webpack, Babel, VS Code, Figma, GitHub Copilot, Claude (AI pair-programming & code review)

AI-Assisted Development: GitHub Copilot, Claude (Anthropic), Prompt Engineering for Code Generation, AI-Powered Debugging & Refactoring, AI-Assisted Code Review, AI-Generated Technical Documentation

Experience by Skill: React.js 4+ yrs | Node.js/Express.js 4+ yrs | MongoDB 4+ yrs | JavaScript/HTML5/CSS3 4+ yrs | Redux Toolkit 4+ yrs | TypeScript 4 yrs 6 mo | Next.js 4 yrs 2 mo

PROFESSIONAL EXPERIENCE

Full Stack Developer — Q2AMedia Services Pvt. Ltd.

Sep 2021 – Apr 2026 (4 yrs 8 mo)

- Delivered 3+ production-grade full-stack applications using React.js, Next.js, Node.js, Express.js, and MongoDB, serving thousands of daily active users with high availability.
- Architected and maintained a shared UI component library of 20+ reusable React components consumed across multiple product features, accelerating team-wide development and cutting duplicate code by 30%.
- Designed, built, and maintained scalable RESTful APIs with Node.js and Express.js integrated with MongoDB, reducing data retrieval errors by 30% through comprehensive validation and exception handling.
- Implemented secure authentication and authorization using JWT, Bcrypt, and Role-Based Access Control (RBAC), enforcing protected routes and role-specific access management across applications.
- Optimized application performance through lazy loading, code splitting, dynamic imports, image optimization, and React memoization (useMemo, useCallback, React.memo), lifting Google Lighthouse scores by 25+ points.
- Migrated application state management to Redux Toolkit, reducing boilerplate by 40% and simplifying complex, cross-component state workflows.

- Built fully responsive, cross-browser interfaces with HTML5, CSS3, JavaScript (ES6+), Bootstrap, CSS Grid, and Flexbox for consistent experiences across desktop, tablet, and mobile.
- Integrated GitHub Copilot and Claude into daily development workflow for AI-assisted code generation, debugging, refactoring, and technical documentation, improving delivery speed and code quality.
- Partnered with UI/UX designers, backend developers, QA, and product stakeholders in Agile/Scrum sprints, owning features end-to-end from requirements through deployment.
- Drove code reviews, debugging, and performance tuning, resolving production issues to improve stability and maintainability using clean coding principles and structured Git workflows.

Engineer — Advance Metering Technology Ltd.

Jul 2015 – Oct 2019

- Graduate Engineer Trainee (Jul 2015 – Jul 2016), confirmed as Engineer (Jul 2016 – Aug 2018), rejoined as Engineer (Nov 2018 – Oct 2019); core engineering role prior to transitioning into software development.

KEY PROJECTS

SarkariResult.rest — Independent Project

Sep 2025 – Present

Next.js, Node.js, Express.js, MongoDB, JWT, AWS S3, Vercel, Render, GitHub Copilot, Claude

- Independently designed and built a full-stack government job listing platform, now serving 10,000+ monthly users with fast load times and strong SEO.
- Developed REST APIs with Node.js and Express.js connected to MongoDB for job listings CRUD, authentication, and search/filter functionality.
- Implemented JWT + Bcrypt authentication with a role-based admin panel for content management.
- Implemented SSR and SSG with Next.js, improving page indexing and cutting Time-to-First-Byte (TTFB) by ~40%.
- Used AWS S3 for scalable storage and delivery of static assets and media files, reducing load on the application server.
- Evaluated Microsoft Azure App Service as an alternative deployment target, benchmarking it against the current Vercel/Render setup for cost and scaling flexibility.
- Structured JSON-LD data for rich search results, boosting organic search visibility.
- Used GitHub Copilot and Claude throughout development for rapid prototyping, code review, debugging, and technical documentation, speeding up solo delivery.
- Deployed frontend on Vercel and backend on Render with a GitHub CI/CD pipeline for automated builds; maintained end-to-end ownership from code to production.

react-perf-kit — Open Source npm Package

Published Aug 2026

JavaScript, TypeScript, React

- Independently designed and published react-perf-kit, an open-source npm package offering ready-to-use performance-optimization utilities for React components.
- Built on core React performance APIs (React.memo, useMemo, useCallback, lazy loading/Suspense) to give developers a plug-and-play way to reduce unnecessary re-renders and cut load/bundle time.
- Authored and maintains full package documentation, enabling straightforward adoption by other React developers.

Real-Time Data App

Jan 2023 – Apr 2023

React.js, REST API, Custom Hooks

- Built a real-time data dashboard to fetch, process, and display live API data with auto-refresh functionality.
- Designed reusable custom React hooks to manage asynchronous state (loading, success, error), cutting repetitive code by 50%.
- Optimized API calls through debouncing and conditional fetching to reduce unnecessary network requests.
- Followed semantic HTML and accessibility best practices to enhance usability and SEO.

CERTIFICATIONS

- Front-End Web Development Course — Geekster (Jan 2021, does not expire)

EDUCATION

Bachelor of Technology (B.Tech), Mechanical Engineering

Uttar Pradesh Technical University (UPTU), 2011 – 2015

Transitioned into Full-Stack Web Development through professional, self-directed learning and hands-on project work.
